High precision timing belts and pulleys = Top belt drive performance

BRECOflex Co.,L.L.C. the market leader in the polyurethane timing belt industry is proud to offer unique belt drive solutions for conveying, indexing, linear drives and power transmission application.

Each timing belt application is subject to specific requirements based on various application parameters like; Speed, Load, Size, Mass, Acceleration, Deceleration, Noise requirements, Tensioning ability i.e., along with matching accessories like Rotating tensioners, Tensioning clamps, Clamps and Slider beds.

To select the most appropriate component combination perfectly sized is crucial for a good performing belt drive.

BRECOflex Co.,L.L.C. offers the most comprehensive product range in the industry in conjunction with professional application engineering support. Our “engineering consultation service” is free of cost. Utilizing our free engineering support leads to the most appropriate belt technology and belt pitch selection, calculated belt and pulley sizing and the most perfect backing material selection or i.e. to the perfect profile selection (selected from approx.5000 existing molds) for profiled timing belts utilized in conveying applications.

Our objective is “100% customer satisfaction”! This applies to product quality, performance, customer service, engineering support, the price performance ratio and (short) lead time.

Using the expertise of our application engineers leads to perfect selected, calculated and appropriate specified drive components providing the best conditions for perfect functioning belt drives, combined with highest service life expectations.
